Cable clamps

flame-resistant version

Cable clamps are used to secure cables and wiring to ceilings. Their compact design also allows installation behind suspended ceilings or partition walls. The practical clamp holds the cables firmly in position. Installation requires a pre-drilled 6 mm hole. A nail anchor, or a screw with an anchor, secures the cable clamp in the hole. The cables are then inserted by lifting the clamp slightly and are held securely. Cables can also be added later: the robust material retains its shape and function even after being bent open.

RoHS ✓ | halogen free | silicone free | Max. 960°C | PP | RAL 7030

CAPACITY IN MM²	PACK QTY	CTN QTY	ARTICLE NO.
